OneSite Patch for CrowdStrike:
The Fastest Way to Patch Your Endpoints

adaptiva

OneSite Patch automates the enterprise patching process and quickly remediates vulnerabilities identified by CrowdStrike Falcon Exposure Management. With Adaptiva and CrowdStrike, you can stay ahead of cyberthreats and maximize productivity by automatically patching critical vulnerabilities and prioritizing the rest using real-time ExPRT data from the CrowdStrike Falcon platform.

Set custom patching settings to align with your organization's specific business and security requirements, then OneSite Patch continuously automates deployment and approval processes to secure endpoints with precision—regardless of their connection or location—all without impacting network bandwidth.

Benefits

1   **Reduce risk by prioritizing critical vulnerabilities and fixing them fast.**

With the option to prioritize deployments based on CrowdStrike's rich vulnerability insights, including real-time ExPRT Rating and Exploit Status, OneSite Patch can rapidly remediate vulnerabilities for Windows and more than 1,500 third party applications as soon as a patch is available. The extensive library of supported apps is continually growing and specific applications can be requested.

2   **Increase efficiency and reduce manual work with automated remediation.**

OneSite Patch reduces manual effort by automating the entire patching process with precision. IT and security teams can precisely mirror their desired patching strategies once, then automation takes care of the rest. When a new patch is available, it can be deployed without any intervention.

3   **Increase patching precision with advanced administrator control and custom settings.**

Granular customization enables administrators to precisely manage automated patching by modeling their organization's specific processes and policies for deployments, applications, devices, servers, groups, locations, testing and approvals. Devices groups from Falcon are automatically imported for easy configuration.

4   **Improve compliance and collaboration with real-time patching visibility and reporting.**

Intuitive dashboards offer real-time insight, custom notifications, and flexible control of patching processes, with specific permissions for key stakeholders and Falcon admins.

Fully Automated Patching With CrowdStrike Threat Intelligence

adaptiva

OneSite Patch rapidly remediates vulnerabilities and reduces manual effort by fully automating even the most complex patching processes. The platform integrates with CrowdStrike Falcon Exposure Management and adapts to any patching strategy. The continuous, hands-free delivery of patches enables teams to reduce risk, improve compliance, and increase visibility.

Key Capabilities:

Automate

AutoPatch

Endpoints are patched automatically with preferred deployment models that do not require manual intervention, ensuring consistent execution with each new patch. Configure patching strategies once, then automation takes care of the rest.

Patch Library

Patches for Windows and 1600+ third party applications are automatically available in the library whenever a new patch is released. Adaptiva processes, tests, and publishes all patches so no manual packaging is required.

Flex Control Panel

Administrator controls can pause, cancel, or rollback any deployment in real-time with intuitive controls that prevent extensive deployment of unstable patches.

Tiered Deployments

Create phased patch deployment tailored to specific user groups or system types and schedule at different times for optimal deployment.

Adapt

Patching Rules

Deploy patches with purpose-built settings that reflect the precise business requirements of each organization.

Patching Exceptions

Automatically handle the deployment of patches differently based on attributes such as expiration, installation requirements, and versions.

Installation Customization

Admins can modify the behavior of individual patches without requiring in-depth knowledge of application intricacies and command-line nuances.

Workflow Creation

Create and execute processes with drag-and-drop workflows, without needing to write scripts or code to customize deployments.

Approval Management

Define and edit specific approval settings, schedules, and notifications for IT and security teams to mirror your organizations policies.

Accelerate

Risk-Based Prioritization

Deploy critical patches immediately with CrowdStrike ExPRT rating filters that accelerate patch deployment with precision.

Device Group Management

Apply specific settings, maintenance windows, and rollout processes to groups of endpoints that share common attributes including business purpose, location, or set of end-users.

Intelligent P2P

Powered by Adaptiva's innovative P2P technology, the OneSite platform scales distribution from a single server, without additional infrastructure or incremental cost.

Off-Network Delivery

Deliver content to off-network devices wherever they are. Endpoints receive content from a geographically optimal source, leveraging peer delivery when possible.

Optimized Network Utilization

Avoid bandwidth throttling and send content faster, at anytime, without interfering with other business traffic.

Patch Analytics

Real-time visibility of patching metrics, trends, and risk exposure. Monitor patching progress and compliance status with accurate and timely information to reliably inform actionable insights.

77% of organizations take **a week or more** to begin a patch deployment after it's released by the manufacturer.

- The State of Patch Management in the Digital Workplace 2023
